

Button

Four tiers, one geometry. Every button in Pebble is the same 52 px pill; hierarchy is carried entirely by colour, and every state is a change in opacity. No shadows, no scale, no glow.

--metric-readiness · teal.400

--negative-text · semantic.negative.text

--text-2 · neutral.200

--surface-card · neutral.800

--surface-app · neutral.900

Geometry & states

Geometry

IDENTICAL ACROSS TIERS

Size never signals importance. **Hierarchy comes from colour** — the medium height exists for dense rows and bottom sheets, not for demoting an action.

Save GoalSave Goal

height	52px · .btn--m 44px
border-radius	--radius-full · 999
padding	0 24px · spacing.24
width	100%
box-shadow	none
label	p1 · 15 / 22

States

OPACITY ONLY

No shrink, no glow, no scale, no new colours. Motion is **opacity 120ms ease** and nothing else; it drops to zero under prefers-reduced-motion.

TIER	HOVER	ACTIVE	DISABLED
primary	0.90	0.80	0.45
secondary	0.75	0.60	0.45
tertiary	0.70	0.55	0.45
destructive	0.70	0.55	0.45

[disabled] also sets cursor: default.

Pairing & labels

Pair your band

Keep it close to your phone while we connect.

Pair Now

I'll Do It Later

✓ DEFAULT PAIR

Primary + tertiary. Use this unless there is a reason not to. The primary commits; the tertiary is the quiet way out. One teal element, and the eye knows where to go.

Stacked vertically, full width, 12px gap, primary on top.

Add your readings

Connect a band, or type today's numbers in yourself.

Pair Now

Enter Manually

✓ TWO REAL ROUTES

Primary + secondary. Both buttons reach the same outcome by different means, so the second earns the outline. If the second action merely declines the first, it is tertiary.

Pair your band

Two teal buttons — the eye has nowhere to land.

Pair Now

Skip For Now

✗ NEVER STACK TWO TEAL

One teal element per screen. A second fill — or an outline on an action that isn't a genuine alternative — flattens the hierarchy the colour exists to create.

Labels

TITLE CASE · ONE TO THREE WORDS

- Name the outcome: **Pair Now**, not *Continue*. **Delete Workout**, not *Confirm*.
- Every button carries a label — **no icon-only buttons**.
- The confirmation should echo the label: a button that says **Publish** produces a toast that says **Published**.
- Set `type="button"` unless the button submits a form.

Token provenance

Every component value traced to its path in `tokens.json`. Three rows have no token to point at and are flagged for the design system to resolve.

PROPERTY	TOKEN PATH	VALUE
height	⚠ <code>none</code> — 52 / 44 are off the spacing scale	52px · 44px
border-radius	<code>radius.full</code>	999
padding-inline	<code>spacing.24</code>	24
label type	<code>typography.text.paragraph.p1.semibold</code>	15 / 22 · 600
label type · tertiary, destructive	<code>typography.text.paragraph.p1.medium</code>	15 / 22 · 500
font-family	<code>typography.fontFamily.text</code>	Google Sans Flex
primary bg	<code>color.metric.readiness</code> → <code>primitive.teal.400</code>	#45C7B3
primary label	⚠ <code>color.neutral.900</code> — no on-primary alias	#07080C
secondary border	<code>borderWidth.thin</code> + <code>color.metric.readiness</code>	1 · #45C7B3
tertiary label	<code>color.text.text-2</code> → <code>neutral.200</code>	#B8BDD3
destructive label	<code>color.semantic.negative.text</code>	#FF9184
card bg	<code>color.surface.card</code> → <code>neutral.800</code>	#0F111B
card radius	<code>radius.20</code>	20
rules, dividers	⚠ <code>--surface-raised</code> — absent from the export; = <code>neutral.700</code>	#282B39

Open questions for the design system

THREE

- **No on-primary alias.** The teal button's label is `neutral.900`. It equals `surface.app`, but semantically it is a foreground on teal. Every teal-filled control will hit this.
- **52 / 44 are untokenised.** Both sit off the spacing scale (...40, 48, 64). Deliberate, but nothing to reference.
- **--surface-raised is not in the export.** Used across the app; value matches `neutral.700` and `semantic.neutral.bg`. Likely a CSS alias that never made it into the token source.

Source

Load after the design-system token stylesheet. The component consumes only existing tokens and defines none of its own.

Set in DM Sans and League Spartan. League Spartan is the system's real numeric face (`fontFamily.numeric`); DM Sans stands in for Google Sans Flex, which is not redistributable — the shipped component uses the real stack.
